

# ID Management

## Dynamic Radio ID Management Utility

One of the most important concepts of today's communications industry is interoperability – the process of ensuring that public safety officials can communicate across city, county, and state borders and on numerous radio systems, allowing them to respond to the call when needed the most. However, managing the different IDs each radio is programmed with can become a tedious and time-consuming task, especially if you aren't equipped with the right tools.

MCM's ID Management Enhancement App is designed to automate and streamline the radio ID management process. It provides users the capability to track the assignment of multiple radio IDs to each subscriber asset record, eliminating the need to manage radio IDs in a separate spreadsheet or database. Radio system managers can identify which systems their subscriber agencies need to interoperate with, and also which ID ranges on those systems are available for each subscriber agency. As IDs are issued to individual radios, the application will proactively monitor the assignment process to ensure that no IDs are duplicated or assigned outside the appropriate range for a given subscriber. These features will not only boost productivity, but also strengthen the data integrity of operations responsible for radio programming.

### CORE APP COMPATIBILITY

*CommSHOP 360° and CommASSET 360°*

### BASIC FUNCTIONALITY

- Fully integrated into the Agency and Asset Modules for seamless work between modules.
- Build ranges within different systems and reserve those ranges for specific agencies.
- Dynamically assign radio IDs based on the next available ID in a specific range.
- Easily browse available IDs to make assignment quick and easy
