

# Recurring Billing

ENHANCEMENT APP

## Service and Subscriber Billing Management

Many communications operations provide billable services for external agencies that share access to a radio system. Without the right tools however, keeping track of what agencies get billed for what services can become a full-time job in and of itself. Therefore, MCM developed the The Recurring Billing Enhancement Application. It allows communications operations to bill external agencies flat rate charges on a monthly, quarterly or yearly frequency. This enables them to tie service contracts directly to specific agency and asset records in the Core Application.

Any service an operation wishes to bill for can be setup as a *line item* in the Recurring Billing app. Users can then define the billing amount and frequency for each line item and begin adding agencies and assets to the appropriate line items. Once the line items are setup, the application will gather and calculate flat-rate billing amounts based on pre-determined criteria, find assets based on that criteria, and pull them into the Recurring Billing App for billing. This allows operations to bill different assets during different billing runs based on specific assets and their asset statuses. Also included is complete invoice and asset billing history. MCM offers an optional eBurst (email) billing module that will allow you to send the individual invoices via email without folding and stuffing invoices.

### CORE APP COMPATIBILITY

CommSHOP 360° and CommASSET 360°

### BASIC FUNCTIONALITY

- Bill by Service and/or by individual asset.
- Define any line item service you wish to bill for and how much you wish to charge for those services.
- Ability to override individual line items for maximum billing accuracy
- Complete invoice and asset billing history
- Send invoices quickly and easily with Eburst (email) capabilities.
