

SightMAP

Interactive Asset Mapping Utility

ENHANCEMENT APP

Managing large, complex radio systems with multiple tower sites spread over an expansive geographical area comes with its share of challenges for a system manager. With regard to effective asset management for such a significant, mission critical investment, making operational decisions based on raw data in the form of reports can prove to be one of those challenges.

SightMAP is an MCM Enhancement App that graphically displays asset and infrastructure information on an interactive map. From what assets are located at a particular base station, to which sites are scheduled for preventative maintenance, SightMAP is ideal for customers whose operations cover a wide area with multiple locations. By allowing managers to see a picture of all of radio tower sites and asset locations, as well as the ability to drill down into these locations to access detailed information from the Core Application, SightMAP brings clarity to the big operating picture. This application will not only allow managers to see where their assets are located, but it also provides the capability to graphically display open work order activity and flags to alert when specific attention is needed at one of the sites.

CORE APP COMPATIBILITY

CommSHOP 360° and CommASSET 360°

BASIC FUNCTIONALITY

- See what sites are in need of preventative maintenance
- See where work orders of a certain type or status are being performed
- See what assets are located at a specific site or infrastructure location
- See where service work needs to be performed
