ENHANCEMENT APP

## Web-Based Asset Tracking for External Agencies

Operations that provide services to external organizations often perform work on assets that are the responsibility of other agencies. However, coordination between the main radio shop and these external agencies can often be a difficult task. The process of manually exchanging spreadsheets and paperwork is a slow and cumbersome task that ties up resources and kills efficiency. Therefore, MCM created the WebASSET Enhancement Application.

WebASSET was developed to provide external users a tool that allows them to view and manage assets that are under their responsibility, but stored in the Core Application database. This allows them to have an active hand in the tracking of their assets. Through a secure login, web users may be given the ability to view assets that have been assigned to their departmental agency in a read only capacity, or at the discretion of the Core Application administrator, they may be given permission to update and populate certain data fields when managing that information is their responsibility. Built on Microsoft's powerful Silverlight platform, WebASSET is an effective way to get the right people involved with the process of real-time asset tracking.

### CORE APP COMPATIBILITY

*CommSHOP 360° and CommASSET 360°*

### BASIC FUNCTIONALITY

- Through the web interface, allow external agencies to view and edit asset information.
- Web users can only view assets assigned to their specific agency.
- Unlimited web user accounts.
- Permissions set in the Core Application control what assets web users can view and what info they can edit.
