Asset and Inventory Management

When it comes to asset and inventory management, the process for managing capitalized and serialized assets and the process for tracking consumable inventory is typically very different. Capital and serialized assets must be accounted for at all times for audit purposes, and these assets get assigned, moved and reused every day. Consumable inventory items are typically sitting on a shelf in a bin or box and provided to individuals and/or departments on an “as needed” basis. Stock levels for these items must be tracked and orders must be placed to replenish parts inventory as quantities get low. Consumable inventory items are often times not re-used, yet organizations must be aware of the amount of money spent on this type of inventory.

While the requirements for tracking assets and inventory items are different, the workflow process for supplying these items can come to a crossroads. When an police offer is hired, he or she may get assigned all assets and inventory items at once. The MCM QuarterMASTER 360° Solution will allow logistics personnel to create a single transaction to issue both serialized and non-serialized inventory to a person and/or department.

Through the Quartermaster transaction, the software will handle the appropriate processes to assign the assets to people and departments accordingly, and also remove the non-serialized items out of inventory and automatically adjust “on-hand” quantities. This way, when a person walks to the counter to receive their necessary equipment and supplies, the clerk can issue everything at once through a streamlined process and still capture the detail needed to be accurate and accountable.

QuarterMASTER 360° Solution Modules:

- Agency Management
- Asset Management
- QuarterMASTER
- Inventory Management
- Purchase Orders
- Reporting

Item	Asset	Description	Qty	Price	Total
G-22	963260	Block 40 caliber Model 22	1	\$356.25	\$356.25
S-4827		XL TurnOut Cadet Shirt	1	\$31.75	\$31.75
P-11482		XL TurnOut Pant	1	\$61.20	\$61.20
Item Total			92.95	Asset Total	356.25
				Total	449.2

Key features of the MCM QuarterMASTER 360° Solution:

- Create transactions to track assignment of serialized and non-serialized (consumable) items to employees, agencies and departments.
- Maintain an employee table to pull valid employee information onto the transaction.
- Simply start the transaction based on an employee number or easily lookup a name within the employee table / list
- Barcode scan or enter the item number(s) for consumable inventory or the asset number(s) for serialized inventory into the item field and the application will build a list of items.
- Once the order is processed, the assets and items will be relieved and assigned to that employee and agency/department.
- Generate multiple soft and hard-copy forms, which will be formatted to the client's specifications
- Signature capture (optional) to confirm receipt of items and assets
- All transactions are historically stored for reporting
- Inventory transactions are created within the inventory module
- Inventory location permissions by user
- Asset transfer history is automatically recorded in the Asset module based on assignments made through the transaction
- Attach documents/files to each transaction
- Seamlessly integrates to MCM's Agency, Asset and Inventory modules
