

asset management software that can integrate with radio systems

For a communications system to be reliable and resilient, certain information must be captured, tracked, and easily managed. Spreadsheets and homegrown databases are clunky, error-prone and unreliable. Commasset lets you track and manage your entire system of assets with one powerful solution, purpose-built for communications.

Commasset helps you:

- know where equipment is + who it's assigned to
- reduce equipment loss + downtime
- prevent duplicate + out-of-range id assignments
- track unique configuration details for each asset type
- access key information related to every site
- stay on top of warranty dates + maintenance deadlines
- automate processes with alerts
- bulk import/update multiple records
- accurately budget for asset replacement
- track funding sources for assets
- stay prepared for annual audits
- visualize, analyze + export data
- keep a record of every change made in the system

includes the following integrated modules:

agencies

organizes records for multiple depts + locations

assets

maintains detailed records for serialized assets

id mgmt

controls + manages id ranges for one or multiple radio systems

sites

stores key info in detailed site profiles

alerts

sends notifications of activity, changes, due dates, etc.

dashboards

displays + tracks key metrics
